

VetoPoint AI

VetoPoint AI

**Others secure the prompt.
VetoPoint AI secures the action.**

Trinorte — Brais Muíño Otero, Adrián Garrote Camoira, Rubina Danilova

Made with **GAMMA**

The Problem

Employees use AI to summarise contracts, analyse customer data and review internal documents, pasting confidential information into unapproved tools.

75%

of knowledge workers already use AI at work

78%

bring their own tools instead of company-approved ones

The Result

Confidential data leaks with no one in control

Source: Microsoft

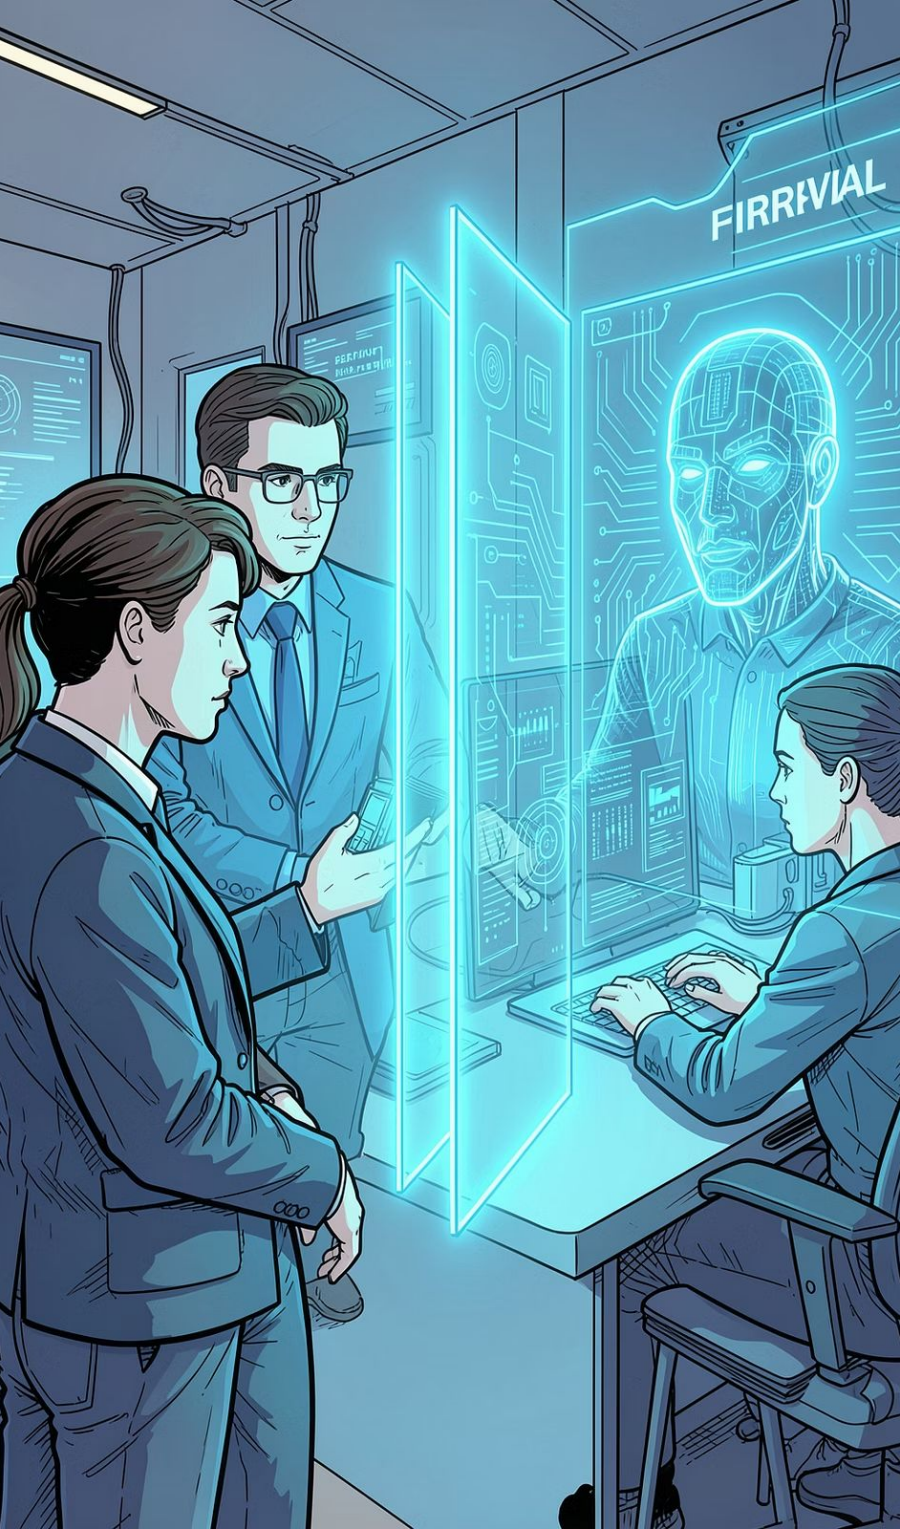

Target Customer

Medium and large companies that already use AI but have no governance.

63%

of organisations have no AI-governance policies.

IBM 2025

The Solution

VetoPoint AI is an action-governance layer that sits between your employees, AI assistants, and autonomous agents — and the systems they can act on.

Understands the action

Reads what an AI request is actually trying to do, in real time.

Governs before execution

Allows safe actions instantly, holds risky ones for a human, and blocks policy violations before they ever run.

Mission: Secure enterprise AI actions.

Vision: A world where AI automation and data privacy safely coexist.

Values: Trust, Transparency, and Human-centric oversight.

How It Works

AI governs detection, scoring, and classification in real time.

Business Model

A high-value enterprise SaaS pricing structure designed for regulated organizations that need secure AI deployment at scale.

Paid Pilot

€25,000

3-month deployment,
up to 3 AI agents

Core Plan

€40,000/year

5 AI agents, for small
regulated companies

Business Plan

€95,000/year

25 AI agents, for
medium organizations

Enterprise Plan

€250,000+/year

Custom volume, for
banks and
governments

Main Costs

Development, cloud infrastructure, security compliance

Key Partners

AI providers such as OpenAI, Microsoft, Google and Anthropic, and cloud platforms

Marketing

Direct B2B sales, LinkedIn, compliance and security events

Growth

Start with EU companies under EU AI Act pressure, then expand internationally

Market Opportunity

**+\$670,000
(≈€620,000)**

Additional average breach cost for organisations with high shadow-AI use, on top of the ~\$4.44M (≈€4.1M) average — IBM 2025.

Aug 2026 → Dec 2027

EU AI Act phases in — transparency obligations from 2 Aug 2026; high-risk governance & documentation from 2 Dec 2027 (Digital Omnibus, 2026).

Growing Market

The AI-governance market is expanding under sustained regulatory pressure.

Social, Ethical & Environmental Value

Data Privacy

GDPR-first; confidential data is inspected in your environment and never stored, sold, or used to train external models.

Bias & Fairness

The risk-scoring model is continuously audited so every action is judged on the same terms.

Transparency

Every allow, hold, or block decision is logged with its reason and the policy that triggered it.

Human Oversight

Elevated-risk actions always route to a human approver; AI never has the final word alone.

Responsible Use of Information

Sensitive data is redacted or withheld before misuse, with access scoped to the task.

Broader Value

Reduces breach risk, makes AI safe to adopt without banning it, and supports EU AI Act compliance.

The Team

Trinorte

Brais Muiño Otero

AI & Product Lead, builds the product and handles technical questions

Adrián Garrote Camoira

Team Leader & Business Strategist

Rubina Danilova

Marketing & Presentation Lead

Complementary profiles across data, business and communication.

Investment / Support Needed

Seed Funding Required: €750,000

This seed funds our first ~12 months — building the MVP, running three enterprise pilots, and securing initial ARR. Hitting that milestone de-risks a larger follow-on growth round that funds scale-up to Year-3 break-even.

Access to pilot companies
